Acknowledgments	viii
Introduction	ix
1. EARLY MATHEMATICAL FOUNDATIONS	1
1 Computation, Information, Numbers and States	1
2 The Origins of Number	2
2.1 Early Counting Devices	4
2.2 The First Number Systems	5
3 Pure Mathematics	9
3.1 Greek Civilisation	10
3.2 Pythagoras	10
4 The Classical Legacy	12
4.1 Irrational Numbers	12
4.2 Proof, Plato and the Platonic Forms	14
2. THE BIRTH OF THE MODERN ERA	16
1 After the Fall of Rome	16
1.1 The Hindu-Arabic Number System	16
1.2 The Islamic Legacy	18
2 The Renaissance	19
2.1 The Science of Aristotle	20
2.2 Copernicus	21
3 The Scientific Revolution	22
3.1 Galileo	22
3.2 Newton	24
4 Pre-Mechanised Computation	25
4.1 Napier's Bones	25
4.2 Logarithms	26
5 Mathematical Breakthroughs	28
5.1 Descartes and Analytic Geometry	28
5.2 Infinitesimal Calculus	30

6	A New Model of the Universe	31
3.	THE MECHANICAL AGE	34
1	Early Computing Machines	35
1.1	Pascal	36
1.2	Leibniz	38
2	Babbage's Calculating Engines	41
2.1	The Difference Engines	42
2.2	The Analytical Engine	46
3	Practical Machines	49
3.1	Variable Toothed Gears	49
3.2	Key-Driven Machines	50
4	The End of the Cogwheel Computer	51
4.	THE UNIVERSAL MACHINE	53
1	The End of Certainty	53
1.1	Technological Progress	53
1.2	The Seeds of Materialism	54
1.3	The Science of Uncertainty	56
1.4	The Mathematics of Uncertainty	57
2	The Mechanisation of Abstraction	58
2.1	The Punched Card Machines	59
2.2	The Zuse Machines	60
2.3	The Bell Relay Machines	62
2.4	Binary Logic Machines	63
2.5	The Harvard Machines	64
3	The First Electronic Machines	64
3.1	ENIAC	65
3.2	Colossus	69
3.3	The Stored Program Computer	76
5.	COMPUTATION IN THEORY	81
1	Abstraction and Unification	81
1.1	The Mathematics of Calculation	83
1.2	Logic	84
2	The Turing Machine	87
2.1	The Idea of a Machine	87
2.2	The Entscheidungsproblem	88
2.3	States and Rules	89

2.4	General Methods	90
2.5	A Turing Machine Example	91
3	The Universal Turing Machine	96
3.1	A Universal Turing Machine Language	98
3.2	The Set of All Possible Computations	105
3.3	The Church-Turing Thesis	107
4	Computation and Computability	108
4.1	The Turing Test and the Chinese Room	109
4.2	The Symbolic Circle	110
4.3	Conscious Experience	111
4.4	Computation Defined	112
6.	COMPUTATION IN PRACTICE	114
1	The von Neumann Architecture	114
1.1	Digital Synchronism	116
1.2	The Fetch-Execute Cycle	117
2	Instructions, Languages and Programs	120
2.1	Instruction Set Architectures	120
2.2	Rule Tables and Logic	121
2.3	The Logic of Addition	123
2.4	More Complex Instructions	125
2.5	A von Neumann Machine Programming Language	127
3	Computing with Switches and Circuits	136
3.1	The Electrical Circuit	137
3.2	Logic Gates	139
3.3	Storage Circuits	140
3.4	Performing Computations	147
4	The Microprocessor Revolution	151
4.1	The Semiconductor Transistor	151
4.2	The Microprocessor	154
4.3	The Evolution of the von Neumann Architecture	156
7.	INFORMATION TECHNOLOGY IN THEORY	161
1	Understanding Technology	162
1.1	The Critical Stance	163
1.2	The Underlying Foundation	165
2	Information, Communication and Meaning	170
2.1	A Human-Inclusive Model of Communication	172
3	Networks and Hierarchies	173

3.1	Networked Communication	174
3.2	Hierarchical Communication	175
3.3	The Hierarchic Bureaucracy	177
4	Information Technology and Control	179
8.	INFORMATION TECHNOLOGY IN PRACTICE	182
1	The Origins of the Information Technology Age	182
1.1	The Rise of the Corporation	183
1.2	Militarism and Nationalism	188
1.3	The Post-War Economic Order	189
1.4	Technology and the US Government	191
2	The Information Technology Revolution	192
2.1	The New Global Financial Order	194
2.2	The Information Economy	197
2.3	Technology and Disorder	202
9.	THE SCIENTIFIC TURN OF MIND	207
1	The Scientific Method	208
2	Science, Biology and the Brain	211
2.1	The Theory of Evolution	212
2.2	DNA and Genetic Algorithms	214
2.3	The Physical Brain	215
3	The Computational Theory of Mind	218
3.1	Artificial Intelligence	219
3.2	Brain-Inspired Systems	221
3.3	The Mind/Brain Problem	223
4	Science and Society	227
4.1	The Scientific World View	228
4.2	The Technological System	229
10.	THE QUESTION OF CONSCIOUSNESS	237
1	Discovering Consciousness	238
1.1	Perception	241
1.2	The Primary Reality of Consciousness	243
2	Science in Perspective	245
2.1	The Regular Universe	246
2.2	The Theory of Everything	248
2.3	Quantum Mechanics	249
3	The End of Physical Science	254

<i>Contents</i>	vii
3.1    The Non-Physical Universe	255
3.2    Creative Intelligence	256
4    The Quality of Life	259
4.1    The Connection with Technology	262
4.2    Past, Present and Future	263
5    A New Understanding	268
References	272
Index	277
